The Center for Medical Innovation at the Swanson School of Engineering is a collaboration among the University of Pittsburgh’s Clinical and Translational Science Institute (CTSI), the Innovation Institute, and the Coulter Translational Research Partnership II (CTRP). Established in 2011, CMI promotes the application and development of innovative biomedical technologies to clinical problems; educates the next generation of innovators in cooperation with the schools of Engineering, Health Sciences, Business, and Law; and facilitates the translation of innovative biomedical technologies into marketable products and services. CMI has supported 81 early-stage projects through more than $1.5 million in funding since inception.

**CMI MISSION**

The mission of CMI has three essential components:

- **Research:** To provide an organizational structure to link engineering faculty, clinicians, and students at the University of Pittsburgh, and to fund early-stage development of innovative biomedical technologies.

- **Education:** To educate the next generation of innovators in the design, development, and commercialization of medical technologies through classroom and hands-on experiences in cooperation with the schools of Engineering, Health Sciences, Business, and Law.

- **Development:** To facilitate the translation of innovative biomedical technologies into marketable products, services, and business ventures in collaboration with the University of Pittsburgh Innovation Institute, Clinical Translational Science Institute (CTSI), and the Coulter Translational Research Partnership.

**Structure**

The CMI promotes collaborations among University of Pittsburgh clinicians and engineers which are likely to result in improvements to healthcare. A multi-disciplinary CMI leadership team is in place to manage the process. Seed money will be available to clinician-engineer teams whose collaborative project proposals are successfully reviewed and approved by CMI.

**Educational Program**

CMI will offer, through the Swanson School’s Department of Bioengineering, two options for a Professional Masters degree, and a new graduate Certificate in Medical Product Innovation. Additionally, engineering graduate students may participate in courses and innovation projects as part of their dissertation work. Medical students will be able to satisfy School of Medicine research requirements through participation in CMI sponsored projects. Courses in innovation and entrepreneurship already offered through the Swanson School of Engineering, the Katz School of Business, and the School of Law will be available to all students interested in medical innovation. Multi-disciplinary student teams (including graduate students in engineering and business, as well as law and medicine) will work with engineering faculty, clinicians, and industry advisors to develop innovative medical technologies through the prototype stage.
2023 ROUND-1 PILOT FUNDING | AWARDS ANNOUNCEMENT

The University of Pittsburgh’s Center for Medical Innovation (CMI) awarded grants totaling $20,000 to one research group through its 2023 Round-1 Pilot Funding Program for Early Stage Medical Technology Research and Development.

CMI, a University Center housed in Pitt’s Swanson School of Engineering, supports applied technology projects in the early stages of development with “kickstart” funding toward the goal of transitioning the research to clinical adoption. Proposals are evaluated on the basis of scientific merit, technical and clinical relevance, potential health care impact and significance, experience of the investigators, and potential in obtaining further financial investment to translate the particular solution to healthcare.

“This is our eleventh year of pilot funding,” said Alan D. Hirschman, PhD, CMI Executive Director. “Since our inception, more than $1.5 million from external funding sources and from the Swanson School of Engineering has been invested in early stage medical technologies. Many of these technologies have the potential to significantly improve the delivery of health care and several new companies have resulted from the program, which has successfully partnered UPMC’s clinicians and surgeons with the Swanson School’s engineering faculty.”

2023 ROUND-1 CMI PILOT FUNDING AWARDEE

AWARD 1
Trent Emerick, MD, MBA
Associate Professor, Department of Anesthesiology, UPMC

Gaurav Chauhan, MD, FIPP
Assistant Professor, Department of Anesthesiology, UPMC

Yougjae Chun, PhD
Associate Professor of Industrial Engineering, Swanson School of Engineering

FOR: A Novel Low-Profile Fully Retrievable Foldable Epidural Lead Array (FELLA) System
Development of a folding spinal electrode array which can be deployed and retrieved percutaneously, eliminating the need for risky laminectomy

PREVIOUSLY AWARDED PILOT FUNDING

2022 PILOT FUNDING AWARDS
Round 2
AWARD 1 – Point-of-care Test for Tuberculosis Screening

AWARD 2 – EndoDx: Non-Invasive Machine-Learning-Based Endometriosis Diagnosis

Round 1
AWARD 1 – Biomedical Vision: Real-time Augmented Reality Visualization of Cardiovascular Disease from Medical Images
